POOL COVERS

INFINITE POOL ENJOYMENT

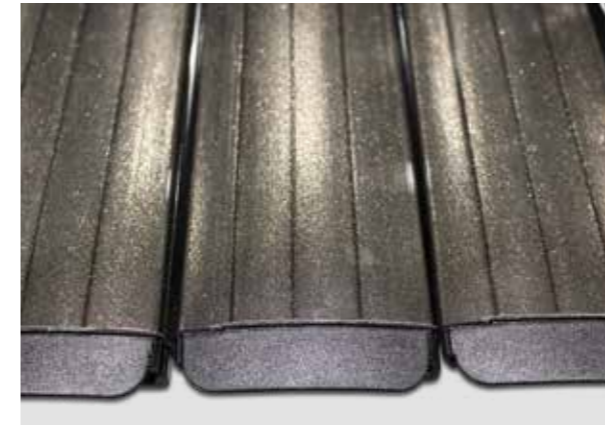

High quality pool equipment for
a crystal-clear swimming pool

High quality pool covers

For more than 10 years, Norsup has specialised in the design and installation of high quality, made-to-measure pool covers for new and existing pools. Every solution is engineered for durability, safety, energy efficiency, and delivering premium protection for modern swimming pools.

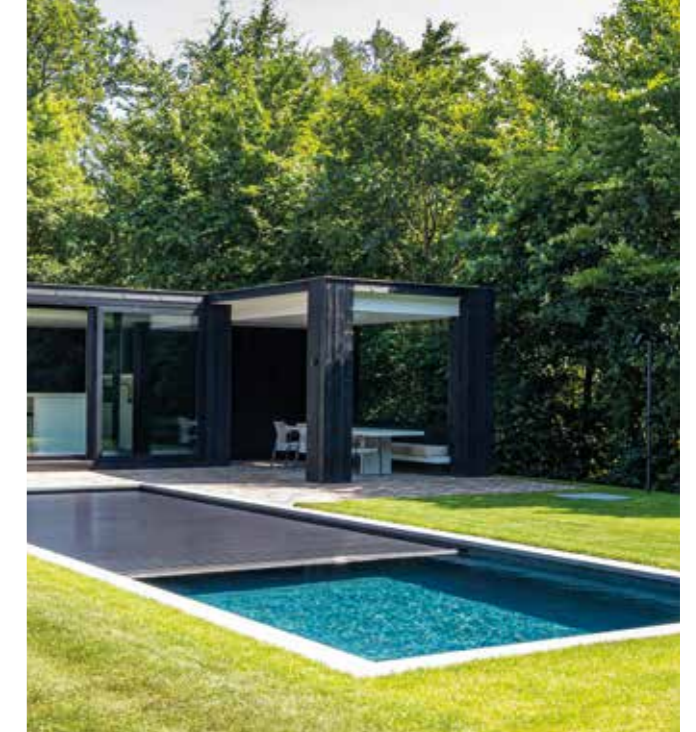

All underwater motors are developed and assembled in-house in Belgium, ensuring reliable performance and long service life. The composite shaft construction guarantees 100% corrosion-free operation, even in demanding environments.

Norsup offers a complete range of PVC and polycarbonate slatted covers, available in both built-in and above-ground configurations to suit any pool design. Advanced welding technology ensures a precise fit and consistent quality.

Key benefits

- Energy efficient – Prevents up to 80% of heat loss and reduces energy costs
- Enhanced protection – Reinforced slats with a load capacity of 7.8 kg/m² for extra safety for children while keeping dirt out and reducing chemical use
- Efficient solar heating – Maximises heat transfer, solar slats capable of increasing water temperature by up to +4°C per day
- Custom made solution – Custom-manufactured PVC and PC slatted covers using the latest welding techniques, available in a wide range of colours

- Corrosion-free operation – Composite shaft technology ensuring complete corrosion resistance
- Made in Belgium – In-house engineering and assembly in Belgium for consistent quality and ensures delivery within a maximum of 10 days after order confirmation

Warranty

5-year warranty against leakage or breakage of the slats, and a 3-year warranty on motors and control systems.

Control options

Combine with NorsupOne V3 or choose the stand alone control unit for flexible and convenient operation.

Through strong engineering, fast service and dependable delivery, Norsup has become a trusted supplier of premium pool covers across Europe.

We deliver premium protection for modern swimming pools.

Built-in systems

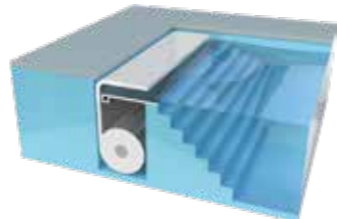

Terrace

The cover is installed in a niche at the back of the pool. A terrace can be constructed above the cover using a support beam. This way the swimming area remains one large whole.

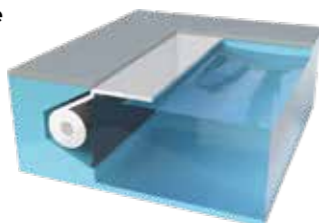

Underwater Terrace

The cover is placed behind and under a dividing wall. The terrace can be finished with tiles using an inlay beam. This creates a shallow terrace in the water, ideal for children!

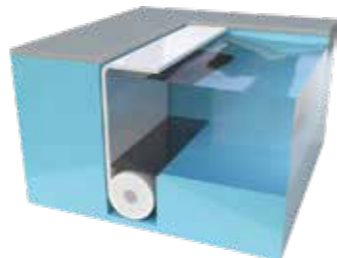

In The Wall / Sloping Niche

The cover is provided in the wall of the pool. You can close off the niche with the help of a partition wall in plastic (PP/PVC). This way the swimming area remains one large whole.

Bottom Pit

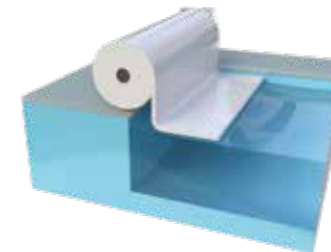

The cover is concealed in the bottom of the pool. Using an inlay beam, the bottom can be further finished with tiles or another ground cover.

Built-up systems

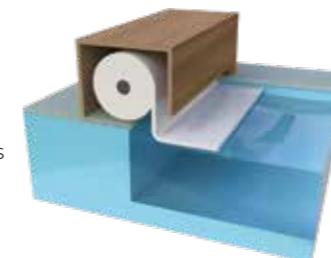

Eco-S

The cover will be visibly integrated on the back of the pool. The roller is left visible using posts in a desired colour. Can only be used in combination with PVC white or light gray slats!

Eco-M

The cover will be visibly integrated on the back of the pool. Using consoles in a desired colour, the roller is encased and thus kept out of sight. Casing is required!

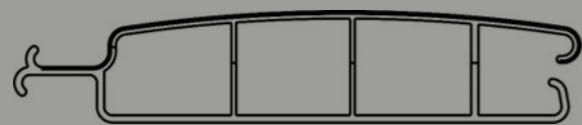

Renovation

Corner Cap

The cover is concealed in a special construction on the bottom. Using inlay beams and plastic (PP/PVC) panels, you create a corner roof that can also serve as an underwater terrace.

PVC 6-series

Slat thickness in mm	14
Slat width in mm	60
Weight in kg per m ²	4.4
Maximum surface area in m ²	90

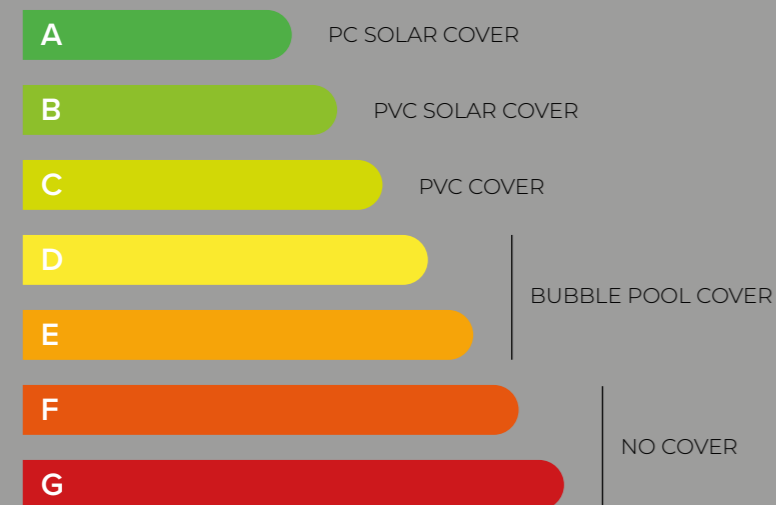

PC 6-series / series-A

Slat thickness in mm	14
Slat width in mm	60
Weight in kg per m ²	3.8 solar
Maximum surface area in m ²	90

Energy label

NF EN 17645

Norsup offers high-quality products combined with reliable aftersales support and service.

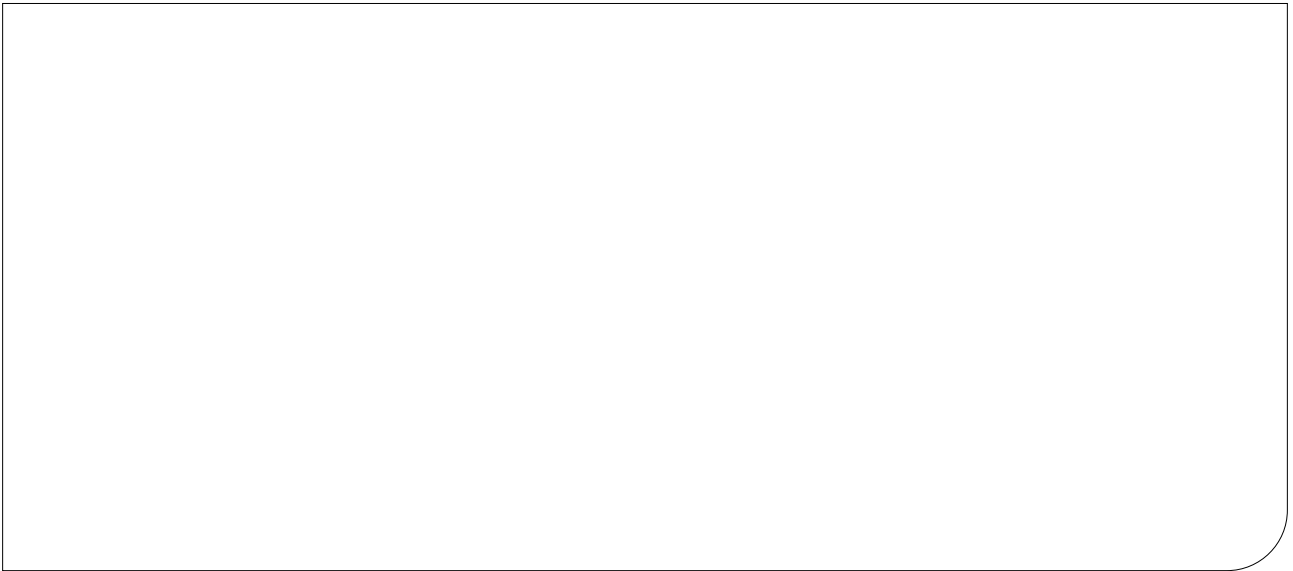

Immediate warnings and alarms

Both the pool user and the dedicated installer will receive immediate warnings and alarms when any abnormal situation is detected. This allows either the pool user or the installer to proactively resolve issues before they escalate.

Maintenance notifications

Pool users will receive notifications for parts replacement and required maintenance, which helps maximise the lifespan of the devices and keep the pool in the best condition.
